

| Decimal | Binary | Hexadecimal |
| :---: | :---: | :---: |
| 0 | 0000 | 0 |
| 1 | 0001 | 1 |
| 2 | 0010 | 2 |
| 3 | 0011 | 3 |
| 4 | 0100 | 4 |
| 5 | 0101 | 5 |
| 6 | 0110 | 6 |
| 7 | 10111 | 7 |
| 8 | 1001 | 8 |
| 9 | 1011 | 9 |
| 11 | 1100 | A |
| 12 | 1101 | B |
| 13 | 1110 | C |
| 14 | 1111 | E |
| 15 |  | F |

| Algorithm | Another way of saying rules and <br> instructions in Computer Science. <br> An Algorithm is a step-by-step <br> procedure or set of instructions to <br> achieve an outcome. |
| :--- | :--- |
| Resolution | The fineness of detail that can <br> be seen in an image. The <br> higher the resolution of an <br> image, the more detail it <br> holds. In computing terms, <br> resolution is measured in dots <br> per inch (dpi). |
| Binary <br> Numbers | A number system that contains <br> two symbols, 0 and 1. This is also <br> known as base 2. All computer <br> data is represented using binary, <br> a number system that uses 0s and <br> 1s. |
| Dene regular number system you <br> are used to counting in. This uses <br> Numbers <br> the numbers 0-9 and place value <br> of multiples of 10. |  |
| Bitmap |  |
| images | One of the individual units (often <br> called dots) that make up an <br> image. |
| Data <br> compression <br> Are organised as a grid of <br> (short for squares called pixels |  |
| To redure elements'). <br> image and audio data in order to <br> transfer it more quickly and so <br> that it takes up less storage space. |  |

## KEMNAL KEY QUESTIONS

1. What is a Binary Number?
2. What would the binary number 100000000 be in denary?
3. Why do computers use binary instead of denary numbers?
4. Convert these numbers from binary to denary: 110 and 1111
5. Convert these numbers from denary to binary: 12 and 28
