KEMNAL KEY QUESTIONS

- 1. What is meant by Digital Citizenship?
- 2. What does a phishing email look like?
- 3. What does the term firewall mean?
- 4. What information should you never disclose when online?
- 5. If something goes wrong what should you do?

Legal Issues: Recording people without permission. Having more technology could mean more potential for cyber-crime and hacking. Often security on secondary devices like fitness trackers are not as good as main devices.

Environmental Issues: Potential for environment to suffer if virtual reality industries become common. By creating a new sector of technology, much more energy is being used to make and produce, along with more waste produced from redundant devices.

Malware is software that can harm devices

Typical actions of malware include deleting or modifying files.

Spyware — secretly monitors user actions, e.g. key presses, and sends information to the hacker. Some spyware can even use your webcam without your knowledge.

Viruses — spreads through normal programs and might slow down your device or change your applications and documents.

Worms — spread from device to device and copy themselves hundreds of times. A worm might copy itself onto your email account and then send a copy to all of your email contacts!

Trojan horse — pretends it will be a useful and safe program, when actually it will try to attack your device.

Adware—displays adverts while it is running; some can serve as spyware, gathering information about you from your hard drive, the web sites you visit, or your keystrokes.

Ways to reduce spam

<u>Use a spam filter</u> – most email clients try to stop spam from reaching you by using a spam filter.

Do not give your email address out – if you don't trust the website or if supplying your email address is optional, don't give it to them.
